機器學習

Assignment #6

Deadline: 2022/05/31 11:59 pm

torchvision.transforms 提供了許多可靠的 API 來讓使用者對圖像進行操作,請試著在data transforms 當中對訓練集進行影像轉換作為影像增強資料集。

- 1. Weak Augmentation 挑選一種data transforms的方法,比較只使用原資料集 vs. 增強後資料集,模型準確率的差異。本題可做三次,每次嘗試不同data transforms。
- 2. **Strong Augmentation** 使用4~6種data transforms,同時作用於原始資料集,比較只使用原資料集 vs. 增強後資料集,模型準確率的差異。
- 3. 比較一、二題的結果,說明你的實驗中,影像資料擴增的結論(例如弱資料擴增 與強擴增的效果差不多?還是強擴增效果優於若擴增?)

Sample Code:

 $\frac{https://colab.research.google.com/drive/1AfjALAXxlmqrxSs5M2ttBe1kont-SDjd?usp=sharing}{}$

Note:

- The assignment should be implemented by **Python**.
- You need to hand in the python code and the report (**PDF only**).
- In your report, it should contain: (請以中文撰寫)
 - **Execution description**: steps how to execute your codes.
 - **Experimental results**: As specified in the assignment.
 - **Conclusion**: The observation from your results.
 - **Discussion**: The questions or the difficulties you met during the implementation.
- Assignment format
 - Zip all your files into a single one and upload it to the E-Course2 website.
- Please format the file name as: Student ID_proj6_verNo, ex: 611410063_proj6_v1.zip
- No copy! Late policy applies.
